# Mathematical Thinking and Block Play

**MARCH 26, 2010**

This workshop looks at the development of block play in young children and the use of blocks as a primary learning tool, specifically for exploring mathematical ideas. This workshop considers how children's spontaneous block play is clearly linked to The National Council of Teachers of Mathematics (NCTM) process and content standards and how documentation of children's block play can be used as an alternative assessment model. Participants experience the joy and intensity of learning as they work with a variety of blocks and expand and refine their own curriculum ideas.
